BASIC-ABSTRACT:

Mouldable flocked sheet, for covering motor vehicle floor or forming moulded upholstery, consists of a laminate of PVC sheet and a stretch fabric, with the flock adhered either to the fabric or the PVC layer.

Goes easily over irregular shapes such as the gear box and propellor shaft housing.

A release sheet is passed under a descending curtain of the liquid PVC, to support a layer which is still liquid or tacky when the stretch fabric is rolled on. The laminate goes under a dryer and the fabric layer is then coated with a thermoplastic or thermosetting adhesive before the flock is applied in known manner such as electrically. The release sheet is stripped off.
